

NANO BROW TREATMENT GUIDELINES

PRE-APPOINTMENT

- Stop using any skin thinners (Vitamin A, glycolic acids, exfoliation) on the brow area 2 weeks prior to your appointment.
- Any waxing or brow shaping should be done at least 2 days before.
- If you tint your brows, tint it at least one week prior to the procedure.
- Cosmetic botox or fillers should be done 2 weeks prior or 2 weeks after.
- DO NOT consume alcohol, caffeine or take any blood thinners (aspirin, ibuprofen, Niacin 48 hours before your procedure, this will cause excess bleeding and may affect your results).
- You may come in with how you normally draw in your brows so we can see what you are used to. This is especially important for clients who desire a specific brow shape. If you are open to suggestions, we will be happy to help design a custom brow to personally suit you.
- You may experience hypersensitivity and more pain around or during your menstrual cycle.
- We will not be able to tattoo over any blemishes, sores, and moles in or around the brow area.
- Pick up numbing packet at our office BEFORE your appointment.
- Apply the numbing cream 30 minutes BEFORE your appointment.

POST TREATMENT CARE

After care is crucial, it is very important to follow these instructions for the full 10-day healing period to ensure proper healing and color retention. Results will vary for all individuals, and we cannot guarantee your results.

- Use a gentle cleanser (lather it up in your hands) and wash your brows morning and night every day for 7-10 days or until the flaking has stopped.
- Make sure you blot the completely dry with a clean towel after washing. Allow NO WATER to collect or sit in the brow area.
- Apply the ointment provided to your brow's morning and night. A very small amount (size of a piece of rice) to each brow with clean fingers.
- Oily skin types may be told to avoid ointment all together and allow a dry heal process for the 7-10 days.
